Re Item V

Reasoned statement under Article 35(2) PCT with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

The following document has been considered for the purposes of this report:

D1: WO-A-00/46666

1. Independent Claims 1, 10, 16, 19, 21 and 24 relate to an improvement of a conventional method of uploading code of a software application onto an external unit for execution, by sequentially and automatically uploading a plurality of different independently executable blocks of protected code to the external unit, each block of the protected code having a function call with arguments that are encrypted executable machine code, and decrypting and executing the blocks in the external unit using only the processor and the memory of the external unit.

In the present case, however, it would have been appropriate to define the invention in only one independent method claim taking into account that the following features are well-known in the art (see document D1):

method of executing software code of a software program on an external unit, wherein the external unit is in communication with a computer, the computer including a memory for holding the software code, and the external unit including an input/output for communication with the computer, a processor and a memory;

and that the invention is distinguished from the aforementioned prior art in that

protected software code is parsed into a plurality of different blocks of code, each block of the protected software code being independently executable and having a function call with arguments that are encrypted executable machine code, the blocks are sequentially and automatically uploaded to the memory of the external unit and decrypted and executed in the external unit using only the processor and

EXAMINATION REPORT - SEPARATE SHEET**

the memory of the external unit, wherein subsequent blocks of code overwrite previously uploaded blocks of code in the memory of the external unit.

Only with these features it is possible to achieve the object of the invention, i.e. to upload dynamically, at runtime, protected blocks of software code to a secure external unit (e.g. a smart card) for decryption and execution so that a secure co-processor environment is provided and the software code to be executed in the external unit is not constrained by the size of the memory in the external unit.

2. Claims 2 - 9, 11 - 15, 17, 18, 20, 22, 23 and 25 - 27 contain modifications of the inventive idea and would also meet the requirements of Article 33(2) and (3) PCT.

1. The applicant is hereby notified that this International Preliminary Examining Authority transmits herewith the international preliminary examination report and its annexes, if any, established on the international application.

2. A copy of the report and its annexes, if any, is being transmitted to the International Bureau for communication to all the elected Offices.

3. Where required by any of the elected Offices, the International Bureau will prepare an English translation of the report (but not of any annexes) and will transmit such translation to those Offices.

4. REMINDER

The applicant must enter the national phase before each elected Office by performing certain acts (filing translations and paying national fees) within 30 months from the priority date (or later in some Offices) (Article 39(1)) (see also the reminder sent by the International Bureau with Form PCT/IB/301).

Where a translation of the international application must be furnished to an elected Office, that translation must contain a translation of any annexes to the international preliminary examination report. It is the applicant's responsibility to prepare and furnish such translation directly to each elected Office concerned.

For further details on the applicable time limits and requirements of the elected Offices, see Volume II of the PCT Applicant's Guide.

The applicant's attention is drawn to Article 33(5), which provides that the criteria of novelty, inventive step and industrial applicability described in Article 33(2) to (4) merely serve the purposes of international preliminary examination and that "any Contracting State may apply additional or different criteria for the purposes of deciding whether, in that State, the claimed inventions is patentable or not" (see also Article 27(5)). Such additional criteria may relate, for example, to exemptions from patentability, requirements for enabling disclosure, clarity and support for the claims.
